

SRS RESTRAINTS & AIR BAG DIAGNOSTIC TRAINER HONDA FIT 2015 - 2017

INTRODUCTION

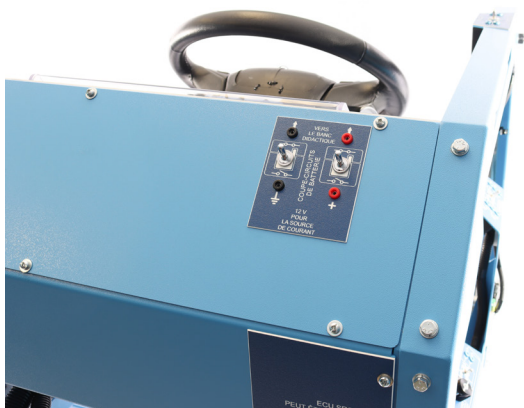

This product is designed to help instructors teach Supplemental Restraint systems and their interaction on the Honda F (fast) CAN Bus and functional K line network; and is based off of a 3rd generation 2015-2017 Honda Fit. This trainer may be used by instructors for ensuring student understanding of the basic system fundamentals and functionality. Programs at all levels will also find this trainer adapts well to hands on work including system analysis and diagnosis without the worry of live airbag or seatbelt tensioner detonators. While the solid-propellant inflators are already detonated, the circuits function as normal in a fully live system providing the learner with real world hands on experience. An important feature is that EVERY SINGLE CONNECTOR has its own test points and a connector disconnect/connect switch that helps to enable the available 26 systems faults for real diagnosis.

WHAT'S IN IT FOR MY STUDENTS ?

Students have quick, visible accessibility to a complete restraint system without having to disassemble a car. With no live components on this trainer, safety is a major benefit for the students. While the individual solid-propellant inflators are inert, this trainer functions like a live system providing students with real world, hands on experience.

The trainer features faults for every circuit which will challenge their troubleshooting ability.

WHAT'S IN IT FOR ME ?

Instructors will appreciate the time-saving of this trainer with accessibility to a complete supplemental restraint system without the hassle of disassembling a car. The size and portability of this trainer saves space in a cramped classroom and makes moving it to multiple classrooms easy.

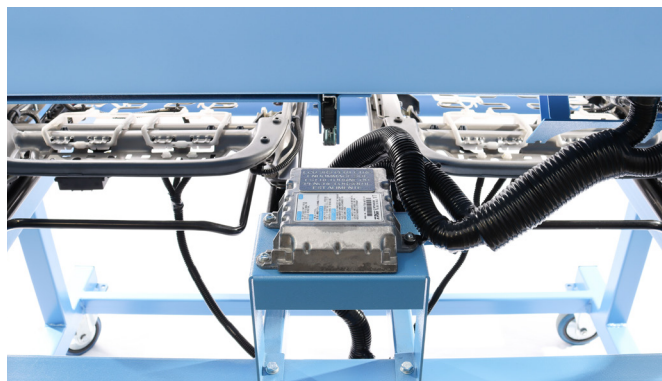

There is a fault for every circuit to enable students to troubleshoot the whole system.

Complete student assignments, instructor and operation manuals are included with the trainer.

SRS RESTRAINTS & AIR BAG DIAGNOSTIC TRAINER HONDA FIT 2015 - 2017

EDUCATIONAL ADVANTAGES

- No codes are present and the SRS light is not illuminated with the power on.
- The 26 inserted faults trigger OEM diagnostic trouble codes DTCs.
- The DTCs from the faults can be diagnosed following the OEM procedure, and the fault can be located and identified.
- Both seats travel fully fore and aft.
- The passenger seat weight can be simulated to apply weight to the seat sensors.
- Powered by a CSA/UL 12v power supply.
- All impact sensors are installed on studs with thumb nuts retaining them. This is to allow for easy removal and replacement.
- All solid-propellant inflators have been detonated and are inert. There is NO danger present as stored energy.
- The SRS ECU breakout box is represented on the dashboard with identifications that resemble the connector end views.
- There is a pull-out shelf/drawer for a scan tool.
- The Diagnostic Datalink Connector (DLC) is present with an accompanying breakout box.

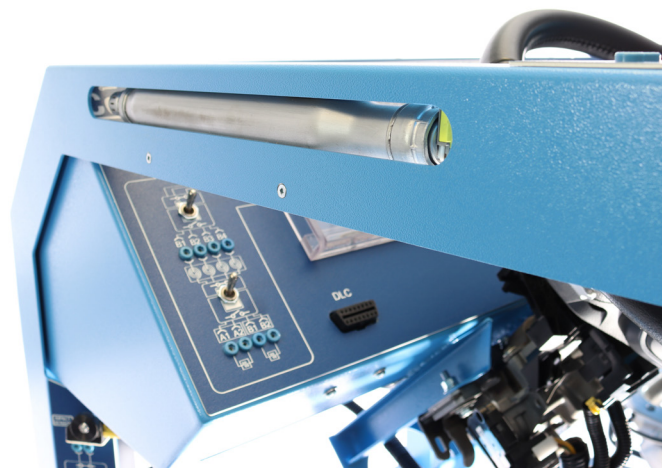

SUPPORT MATERIALS

- The complete training system comes with the following support materials:
- Operation manual, instructor manual and student manual including schematics and answer keys for the instructor
- Breakout box terminal identifications with accompanying documentation to guide students
- Safety warnings about how air bags are deployed
- Component identification

SRS RESTRAINTS & AIR BAG DIAGNOSTIC TRAINER HONDA FIT 2015 - 2017

DESCRIPTION OF EQUIPMENT

- Honda OEM components (recycled)
- SDM Module (Sensing and Diagnostic Module)
- Impact sensors
- Dashboard (IPC cluster)
- Steering wheel
- Steering column
- OBDII Diagnostic Datalink Connector (DLC) is present with an accompanying breakout box.
- Two front seats with position, presence, and weight sensors functional
- The rails of the two front seats with their position, presence, and weight sensors
- All solid-propellant inflators in the airbags and tensioners have been deployed for safety and have been replaced with the appropriate resistance to represent actual system resistance.

Optional equipment

- Dust cover
- Remote training

VEHICLE APPLICATION

- 2015-2017 Honda Fit 5 door with automatic transmission (3rd gen)

POWER REQUIREMENTS

- 120V 15A standard outlet

PHYSICAL SPECIFICATIONS

- Dimensions: 32" L x 50"W x 52 " H
- Weight: 300+ LBS
